Types of Plate Margins				What is a Natural Hazard			<ul> <li>You can't stop earthquakes, so earthquake-prone regions follow these three methods to reduce potential damage:</li> <li>Building earthquake-resistant buildings</li> <li>Raising public awareness</li> <li>Improving earthquake prediction</li> </ul>			
Destructive Plate Margin				A natural hazard is a natural process which could cause death, injury or disruption to humans, property and possessions.						
When the denser plate subducts beneath the other, friction causes it to melt and become molten magma.			Geological Hazard		Meteorological Hazard		* *			
The magma forces its ways up to the surface to form a volcano. This margin is also responsible for <b>devastating</b> earthquakes.			•		ds caused by weather d climate.	HIC - CS: Christchurhc, New Zealand 2011 Causes The 6.3 magnitude earthquake struck New Zealand at 12:51				
Constructive Plate Margin			Causes of Earthquakes			on 22 February 2011. The epicentre was 6 miles South East of Christchurch and the focus was very shallow at 3.1 miles. The earthquake occurred on a conservative plate margin where the Pacific Plate slid past the Australian Plate in the opposite direction.				
Here two plates are <b>moving apart</b> causing new magma to reach the surface through the gap. Volcanoes			Earthquakes are caused when two plates become <u>locked</u> causing <u>friction</u> to build up. From this <u>stress</u> , the <u>pressure</u> will eventually be released, triggering the plates to more into a new position. This measures causes are reading the							

the plates to move into a new position. This movement causes energy in the

form of seismic waves, to travel from the focus towards the epicentre. As a

result, the crust vibrates triggering an earthquake.

The point directly above the focus, where the seismic waves

SEISMIC WAVES (energy waves) travel out from the focus.

The point at which pressure is released is called the FOCUS.

reach first, is called the EPICENTRE.

#### Primary Effects

- 181 killed, 2000 injured, 800,000 affected
- Hundreds of kms of water and sewage pipes damaged
- 50% + of Central City buildings severely damaged including the cathedral
- 80% of city without electricity

# Secondary Effects

- Business out of action for long periods causing losses of income and jobs
- Damage to roads through liquefaction made it difficult for emergency
  - services People suffered from mental health conditions

Here two plates are **moving apart** causing new magma to reach the surface through the gap. Volcanoes formed along this crack cause a submarine mountain range such as those in the **Mid Atlantic Ridge**.

#### **Conservative Plate Margin**

A conservative plate boundary occurs where plates **slide past each other** in opposite directions, or in the same direction but at different speeds. This is responsible for earthquakes such as the ones happening along the San Andreas Fault, USA.

#### Aid involves assisting after the ruction storm, commonly in LIDs. mprove Development Planning The scale of the impacts Involves getting people and the pends on the whether the emergency services ready to ntry has the resources cope deal with the impacts. with the storm. Prediction Education tant monitoring can help to Teaching people about what to ve advanced warning of a do in a tropical storm. tropical storm **Primary Effects of Tropical Storms**

Aid

- he intense winds of tropical storms can destroy whole ommunities, buildings and communication networks.
- s well as their own destructive energy, the winds can generate bnormally high waves called storm surges.
- ometimes the most destructive elements of a storm are these ubsequent high seas and flooding they cause to coastal areas.

### Secondary Effects of Tropical Storms

- distress, poverty and ill
- sanitation makes it
- ing employment.

## 2013

ber 2013 and gained " and made landfall on pines.

r ships deliver aid e areas. tion on typhoon

#### Case Study: Storm Eva, 2015

Causes

Effects

Foss Barrier failed

A64 shut

**Carbon Capture** 

This involves new tech

**International Agreements** 

reduce climate

Countries aim to cut emissions by signing

international deals and by setting targets.

400 people evacuated

300y/o Tad bridge collapsed

Jorvik Centre shut for a year

3500 properties affected

# 

Dec 2015 was the wettest December on record – average: 120mm, Dec 2015: 230mm. This meant that the River Ouse, York peaked at 5.2m above normal.

# Management

- £10m to improve York defences
- 10,000 sandbags used
- 600 military personnel used to help with clear up
- £1m in aid donated
- Foss Barrier pumping station improved and raised

# What is Climate Change?

Climate change is a large-scale, long-term shift in the planet's weather patterns or average temperatures. Earth has had tropical climates and ice ages many times in its 4.5 billion years.

	Recent Evidence for climate change.
Global temperature	Average global temperatures have increased by more than <b>0.6°C since 1950</b> .
Ice sheets & glaciers	Many of the world's glaciers and ice sheets are melting. E.g. the Arctic sea ice has declined by <b>10% in 30 years</b> .
Sea Level Change	Average global <b>sea level has risen by 10-20cms</b> in the past 100 years. This is due to the additional water from ice and thermal expansion.
	Exhaused Creenhouse Effect

# **Enhanced Greenhouse Effect**

Recently there has been an increase in humans burning fossil fuels for energy. These fuels (gas, coal and oil) emit greenhouse gases. This is making the Earth's atmosphere thicker, therefore trapping more solar radiation and causing less to be reflected. As a result, the Earth is becoming warmer.

Evidence of natural change			
Orbital Changes	Some argue that climate change is linked to how the Earth orbits the Sun, and the way it wobbles and tilts as it does it.		
Sun Spots	Dark spots on the Sun are called Sun spots. They increase the <b>amount of energy Earth receives</b> from the Sun.		
Volcanic Eruptions	Volcanoes release large amounts of <b>dust containing gases</b> . These can <b>block sunlight</b> and results in cooler temperatures.		

Managing Climate Change				
nology designed to e change.	Planting Trees Planting trees increase the amount of carbon is absorbed from atmosphere.			

#### **Renewable Energy**

Replacing fossil fuels based energy with clean/natural sources of energy.

# **Changing pattern of Tropical Storms**

agement of Tropical Storms

entist believe that global warming is having an impact on the quency and strength of tropical storms. This may be due to an increase in ocean temperatures.
